

PTech Profile

PTech

2025

To be a company that embrace innovation, coherent international standards and delivers high quality, reliable, and affordable solutions.

About Our Company

A Brief Story About The Company

Every single customer is very special. They deserve to use quality and manageable products. Another indispensable feature for products is user friendliness. It's hard to understand structure and connect all components. Moreover, these products must be released without gap on time in a competitive environment.

In addition to the entire product management process, creating a structure that facilitates monitoring and management with a comprehensive approach in reliable hands increases product quality and cooperation between Product, test and developer teams. And PTech Technology, a SaaS company, was born to do all these processes at international standards with its professional staff.

Vision

To be a company that embrace innovation, coherent international standards and delivers high quality, reliable, and affordable “Change, but know what you will affect” service solutions.

Mission

01

02

To serve our clients services and products that sustainable, cost-effective high quality solutions in all main product domains.

To provide support from the perspective of speed, quality and workforce related to the tracking, control and documentation of the products.

03

04

To provide our employees with a supportive and happy working environment in a corporate culture dominated by honesty, respect and team spirit.

A service that shows where a change affects software systems.

Key Factors

01 Trust and Mutual Respect

While conducting our business processes transparently with our customers, we fulfill our responsibilities on time and completely.

02 Responsibility

The information and trade secrets of all our individual or corporate customers are protected with great care.

03 Customer Focus

We develop our solutions according to the needs of our customers. The main criterion of our success is customer satisfaction.

04 Creativity and Innovation

A web-based platform that automatically maps and analyzes the impact of code, module, or data structure changes across a software system.

05 Certification

We certify all our processes with international authorities.

06 Professional Staff

We are working with solution-oriented teammates who are experts, equipped, have high communication skills in their field.

07 Affordable

We offer highly competitive prices using our advantages.

08 Solution Oriented

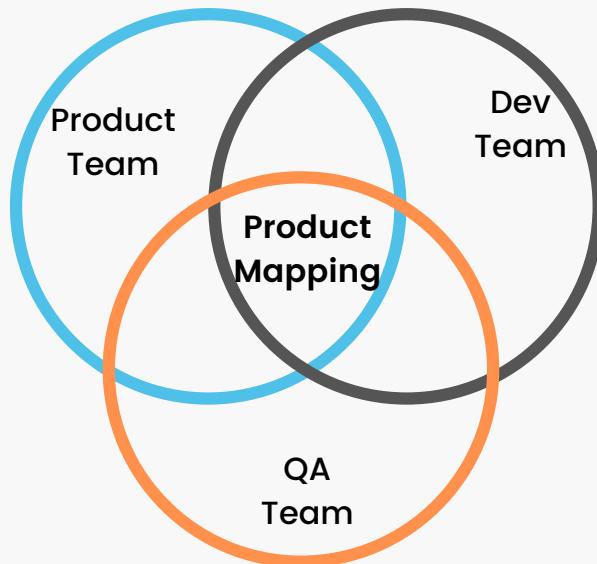

Solid match to a real-world problem with high developer value.

Problems

What do Product Mapping solve?

There are some difficulties in the processes of product emergence and development. One of the most important of these challenges is to be able to analyze and synthesize the product in a healthy way. For this purpose, the relationships between components, functions and pages should be laid out properly. Otherwise, software development and testing activities are also negatively affected by this. This can lead to an increase in costs with a loss of time and effort on the one hand, and a loss of money with a decrease in product quality and customer dissatisfaction on the other.

Summary

- Problem

Modern software systems are complex, interconnected, and hard to maintain.

When a developer modifies a file, module, API, or database table, it's nearly impossible to see the full impact across layers—leading to regressions, outages, and wasted developer hours.

- Solution

A web-based platform that automatically maps and analyzes the impact of code, module, or data structure changes across a software system.

It visualizes the relationships and highlights which parts of the application will be affected — before the code is deployed.

- Target Market

Mid to large software teams

Enterprise IT departments (finance, health, telecom)

DevOps and QA teams

Software consultants and outsourcing agencies

- Current Stage

Prototype (in planning)

Design & architecture in progress
